10-12-2018 Meeting Summary

First, we discussed about the basic app design, and the team got feedback from Nikki and Gavin. With the bunny face, it needs to be bigger, so it could be fit to the screen. On the other hand, the color is good. Besides that, we also talked about the design of the robot now and in the future.

Next, we went through some of the sections in the requirement such as the meaning of the app, the output from the app, and what the app do for, how it could help the kids to be developed. Gavin sent a link to the team about development of human, so we could understand more.

The last thing we had covered is that we reported the progress and showed what we had done in last week. The face detection was almost done which means it could detect the faces from the front, but not from the angle. Furthermore, the app screen would turn red if there is no face detected.
