11-02-2018 Meeting Summary

First, we discussed the Bluetooth connection between the phone and arduino. There were some problems with the connection such that the blueSMIRF could only connect to apple devices, and the signal could send only one way from devices to arduino, but not the other way. Gavin gave us some advice, such as using another bluetooth like the HC-05, or using TTY/terminal to test the connection between the arduino and other devices.

Kellen also mentioned starting the WABBS documentation with Java docs which would include a getting started section that will allow future teams to quickly start developing for WABBS.

Since we need to train the classifier on a non-team member's face, we considered making Debra the volunteer. The topic requires a follow up since we could not discuss the possibility with Yohan as he was absent.
